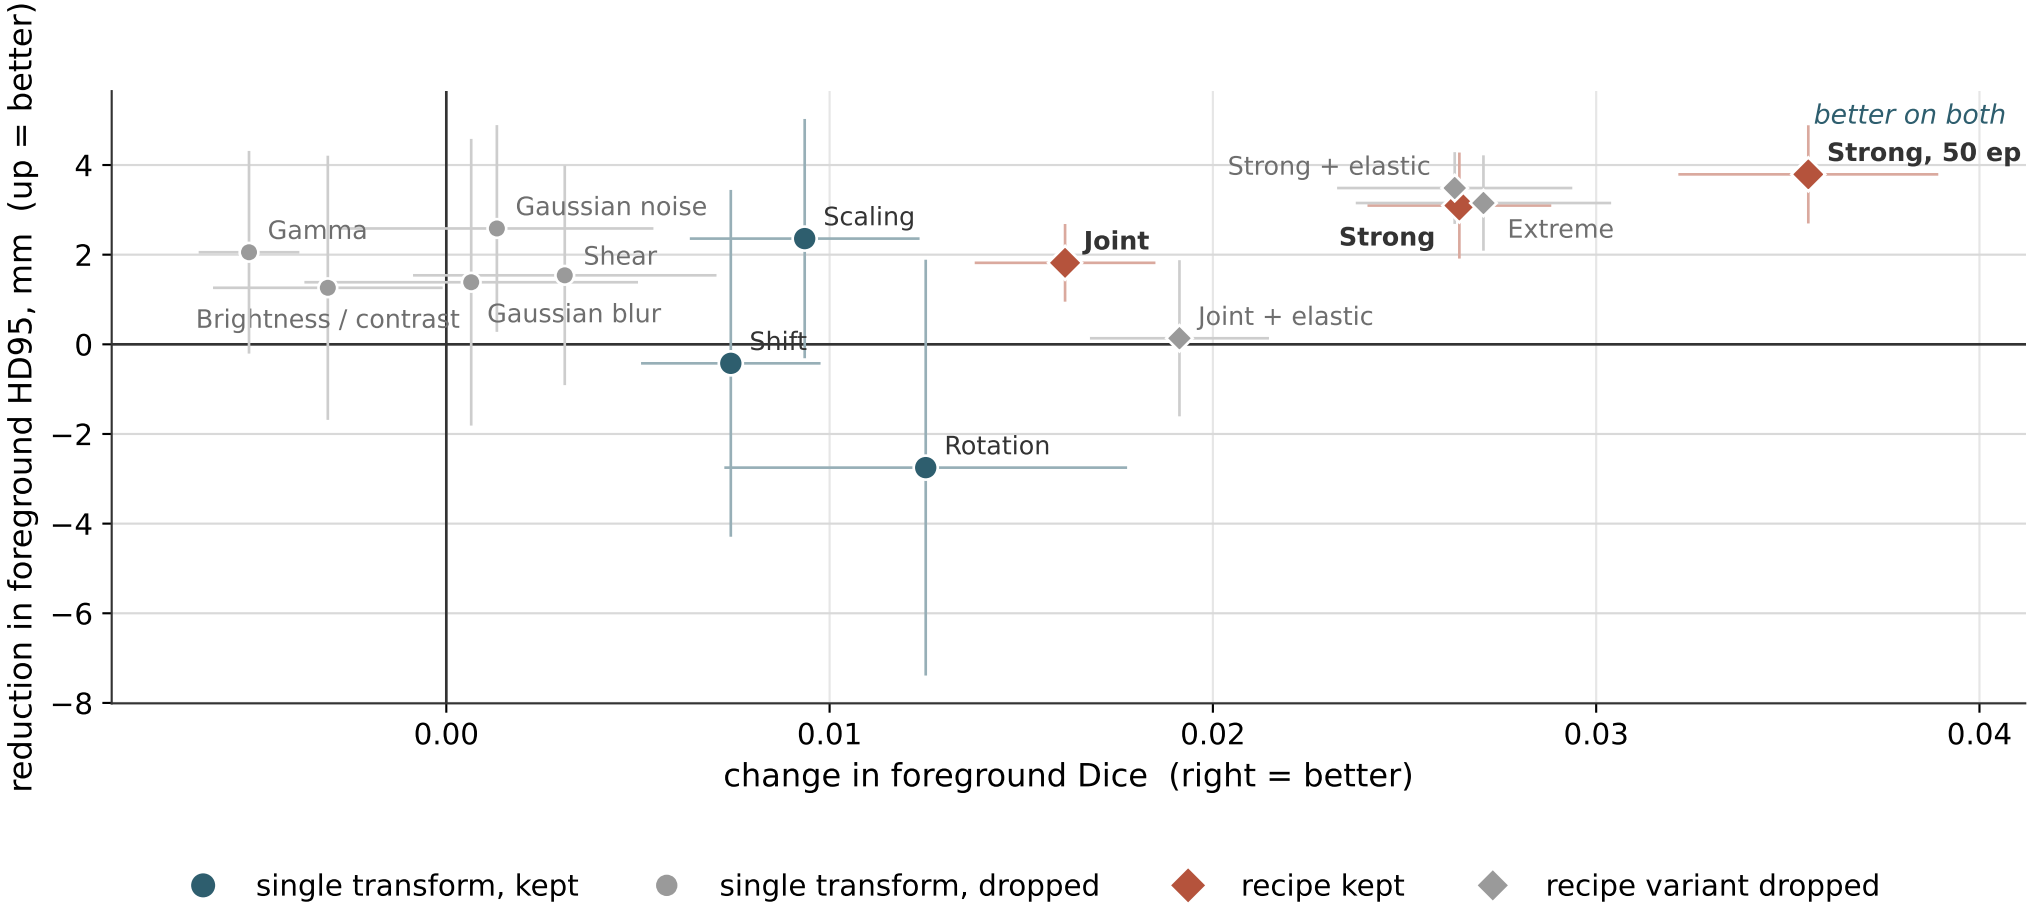
# Dice and HD95 Mostly Improve Together; Rotation Alone Worsens HD95, and Elastic Erases the Joint Recipe's HD95 Gain

Every arm on Improved ENet against no augmentation, paired by fold and seed: single transforms 4 runs (seed 0), recipes 12 runs. Bars = ±1 standard error of the paired change.



*HD95 is the 95th-percentile surface distance in mm, averaged over the four organs; a reduction is an improvement. HD95 is outlier-prone, which is why it was not used to choose transforms. Source: docs/augmentation_results/per_run.csv.*
