Augmentation Helps the Esophagus Most and the Heart Least, on Every Model

Change in 3D Dice per organ against the same model without augmentation, paired by fold and seed; mean of 12 runs, with how many of the 12 improved.

	Esophagus	Heart	Trachea	Aorta	Foreground
BASE ENet · joint	+0.047 10/12	+0.018 11/12	+0.015 11/12	+0.053 12/12	**+0.033** **12/12**

Joint: rotation ±10°, scaling 0.9–1.1, shift 10%, p 0.5. Strong: rotation ±15°, scaling 0.8–1.2, shift 10%, p 0.7. Darker = larger gain; a decrease would be white. Full40 corrected SegTHOR, 4 folds × 3 seeds. Source: docs/augmentation_results/per_run.csv.
