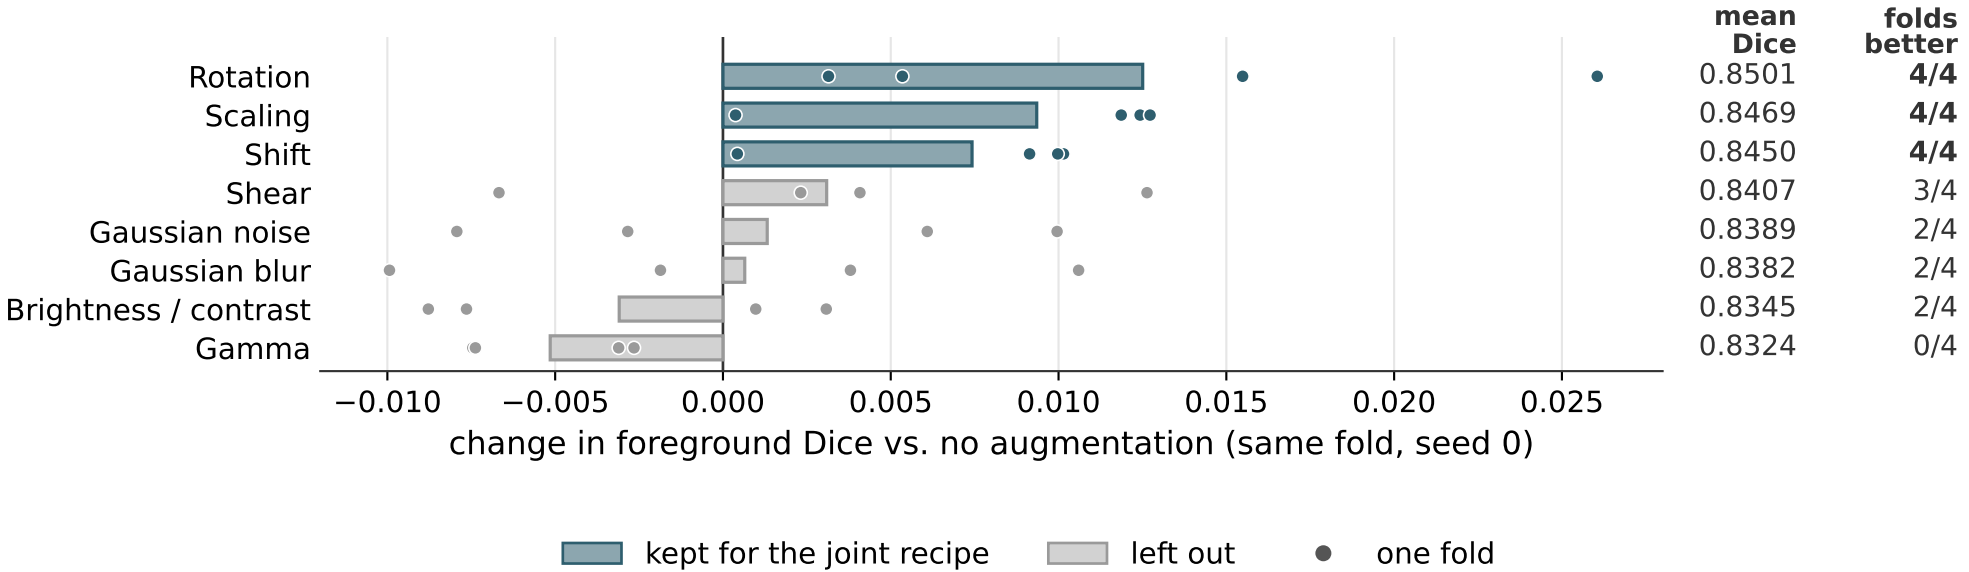
Only Rotation, Scaling and Shift Improve Every Fold; Intensity Transforms Do Not Help

Each transform added alone to Improved ENet (Dice + CE, full preprocessing), 4 folds, seed 0. Bar = mean change against the seed-0 control of the same fold (control mean Dice 0.8376); dots = the four folds.



3D foreground Dice (mean over esophagus, heart, trachea, aorta) on the original CT grid; Full40 corrected SegTHOR, patient-level folds of 30 train / 10 validation patients. Source: docs/augmentation_results/per_run.csv (from metrics/<experiment>_fold/seed0/summary.json).*
