
Run means of the 50-epoch models: Dice, HD95 and ASSD
One point per run (fold x seed); 3D on the original CT grid at the best checkpoint; ResEnc rows use strong geometric augmentation
Dice, mean of four organs
HD95 (mm), mean of four organs
ASSD (mm), mean of four organs
50-epoch model
ENet · CE, no preprocessing (12 runs)
ENet · Dice+CE, preprocessed (12 runs)
ResEnc DS + strong geom. (control, 12 runs)
+ cosine LR (12 runs)
+ ramped boundary (12 runs)
+ fixed boundary 0.08 (12 runs)
+ 2.5D ±1, ramped boundary (12 runs)
+ 2.5D ±1, fixed boundary 0.08 (4 runs)
