Patient 24: What the 3-Slice and 5-Slice ENet Inputs Contain

Mean over the four organs (CV, 3 seeds) - 3-slice: Dice 0.680, HD95 22.7 mm, ASSD 4.83 mm | 5-slice: Dice 0.668, HD95 18.3 mm, ASSD 4.61 mm. One row per organ at its largest ground-truth slice. Neighbouring slices are 2.5 mm apart, so even the 5-slice input spans only ±5 mm.

Raw CT from data/segthor_train_full (corrected labels), not the resampled network input. CT window -160 to 240 HU. Axial view, anterior up, patient left on the right. Crop differs per organ.
