# Patient 40: What the 3-Slice and 5-Slice ENet Inputs Contain

Mean over the four organs (CV, 3 seeds) - 3-slice: Dice 0.903, HD95 5.7 mm, ASSD 1.30 mm | 5-slice: Dice 0.896, HD95 6.4 mm, ASSD 1.78 mm. One row per organ at its largest ground-truth slice. Neighbouring slices are 2.5 mm apart, so even the 5-slice input spans only ±5 mm.

*Raw CT from data/segthor_train_full (corrected labels), not the resampled network input. CT window -160 to 240 HU. Axial view, anterior up, patient left on the right. Crop differs per organ.*
