Paired change against the 2D control without boundary loss

ResEnc DS U-Net · strong geometric augmentation · 50 epochs · 4-fold CV, 10 val patients per fold · 3 seeds per fold

Each point is one fold's 3D metric of the run minus the control's on the same 10 validation patients (best checkpoint, mean over the four organs); HD95 is shown as a reduction so right is better on both. Colour = loss, shape = input (circle 2D, diamond 2.5D).
